

## **Protein Design**

The session will focus on protein design including experimental and computational approaches and highlighting the relevance of the synergy between both. The session intends to include new perspectives and horizons in the field of protein design, which emerge with the eruption of artificial intelligence.

In relation to applications, the session will offer innovative perspectives on how protein engineering can tackle new challenges for the future in areas as diverse as, biomedicine, material sciences, bioelectronics, sustainable technologies and bioremediation.

### **Invited speakers**

Sarel Fleishman, Weizzman Institute  
Charlotte Deane, Oxford University

### **3-4 short talks selected from abstracts**

### **Session chairs**

Aitziber L. Cortajarena, CIC biomaGUNE  
Ingemar André, Lund University

***Sponsored by Protein Society***
